F. Simulator Mode

any new friend it will take some quality time for you to understand and appreciate the tremendous capabilities of the GNS 480. Garmin ships a Trainer CD to be used in PC computers. The trainer is also available on the web at the Garmin site and is almost completely free. We feel that with our manual combined with their trainer or the docking station from Lone Star Aviation is the best combination for learning the unit.

Lone Star Aviation makes a docking station called the **Commander 2900G**, which allows you to practice and explore operations with the unit removed from the aircraft (take-home mode). It is a wonderful way to enhance your ability to perform the operations which are important to you without the distractions, and outside vigilance that is a part of flying.

They can be reached at:

Lone Star Aviation  
 604 South Wisteria Street  
 Mansfield, TX 76063-2423  
 (817) 633-6103
